DETAILED ACTION

- 1. Prior to setting forth the restriction requirement, it is pointed out that the claims are drawn to patentably distinct methods and products. The methods rely upon anti-TGF-beta antibodies, PDGF and RGD, which differ in structure and modes of action to such an extent and require non-coextensive searches to such an extent that they are considered separately patentable. Therefore, the restriction will be set forth for each of the various groups, irrespective of the format of the claims, because these are not proper species. If applicant adds additional agents that are structurally from those claimed, then such additional agents may be subject to further Restriction.
- 2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
- I. Claims 1, 2, 5-7 and 13-15, drawn to methods of treating pathologies with anti-TGF beta antibodies, classified in Class 424, subclass 130.1.
- II. Claims 1, 3, 5, 6, 8 and 13-15, drawn to methods of treating pathologies with PDGF, classified in Class 514, subclass 8.
- III. Claims 1, 4-6, 9-10 and 13-15, drawn to methods of treating pathologies with RGD, classified in Class 514, subclass 12.
- IV. Claims 10-12, drawn to methods of detecting the presence of pathologies by determining the level of TGF-beta, classified in Class 435, subclass 7.1.
 - V. Claims 16-17, drawn to TGF-beta-specific antibodies, classified in Class 530, subclass 387.1.
- VI. Claim 18, drawn to a cell line which produces an anti-TGF-beta antibody, classified in Class 435, subclass 326.
- 3. Inventions IV and I/IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)).

The product can be used in materially difference processes such as affinity purification and detection assays other than detecting the presence of pathologies.

4. Inventions I/II/III/IV are different methods of use, which require different ingredients, process steps and endpoints. In particular, the ingredients differ with respect to biochemical properties and modes of action. Therefore, they are patentably distinct.

Therefore they are novel and unobvious in view of each other and are patentably distinct.

Application/Control Number: 10/638,172 Page 2

Art Unit: 1644

5. Inventions V and VI are different products. Antibodies and cell lines are distinct because their structures and modes of action are different. Therefore, they are patentably distinct.

- 6. Inventions (V and II/III) and (VI and I/II/III/IV) are not related as products and methods of use.
- 7. Because these inventions are distinct for the reasons given above and the search required for any group from Groups I-VI is not required for any other group from Groups I-VI and Groups I-VI have acquired a separate status in the art because the searches are not co-extensive and encompass divergent subject matter, restriction for examination purposes as indicated is proper.
- 8. This application contains claims directed to the following patentably distinct species of the claimed Groups I/II/III/IV: wherein the pathology is:
 - A) glomerulonephritis,
 - B) ARDS or
 - C) liver cirrhosis.

These species are distinct because the pathological conditions differ in etiologies and therapeutic endpoints or diagnostic endpoints.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6 11 and 13 are generic.

9. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

10. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Application/Control Number: 10/638,172 Page 3

Art Unit: 1644

11. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Gambel whose telephone number is (571) 272-0844. The examiner can normally be reached Monday through Thursday from 7:30 am to 6:00 pm. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (571) 272-0841.

The fax number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
